

NerdCommand.info — GitHub Pages Deploy Package

File Structure

```
nerdcommand-site/
├── index.html      ← main website (copy full HTML below)
├── README.md       ← this file
├── .github/
│   └── workflows/
│       └── deploy.yml ← auto-deploy on push (optional)
```

Step 1 — Create the GitHub Repo

1. Go to github.com → **New repository**
 2. Name it: `nerdcommand-site` (or `nerdcommand.github.io` for root hosting)
 3. Set to **Public** (required for free GitHub Pages)
 4. Click **Create repository**
-

Step 2 — Add index.html

Create a file called `index.html` in the repo root.

Paste the full HTML from the `index.html` artifact in this conversation.

The file is fully self-contained — no npm, no build step, no dependencies to install.
All fonts load from Google Fonts CDN. Zero config required.

Step 3 — Enable GitHub Pages

1. Go to your repo → **Settings** → **Pages**
2. Under **Source**, select: `Deploy from a branch`
3. Branch: `main` | Folder: `/ (root)`
4. Click **Save**
5. GitHub gives you a URL like: `https://yourusername.github.io/nerdcommand-site/`

Custom domain: To use `nerdcommand.info`, add a `CNAME` file to the repo root containing just:

```
nerdcommand.info
```

Then in your domain registrar (GoDaddy, Namecheap, etc.) set DNS:

Type: A	Host: @	Value: 185.199.108.153
Type: A	Host: @	Value: 185.199.109.153
Type: A	Host: @	Value: 185.199.110.153
Type: A	Host: @	Value: 185.199.111.153
Type: CNAME	Host: www	Value: yourusername.github.io

Step 4 — Optional Auto-Deploy Workflow

Create `.github/workflows/deploy.yml` to auto-deploy on every push:

```
yml
```

```

name: Deploy to GitHub Pages

on:
  push:
    branches: [main]

permissions:
  contents: read
  pages: write
  id-token: write

jobs:
  deploy:
    runs-on: ubuntu-latest
    environment:
      name: github-pages
      url: ${ steps.deployment.outputs.page_url }
    steps:
      - uses: actions/checkout@v4
      - uses: actions/configure-pages@v4
      - uses: actions/upload-pages-artifact@v3
        with:
          path: '.'
      - id: deployment
        uses: actions/deploy-pages@v4

```

What's Included in the Site

Section	Content
Navigation	Fixed nav with smooth scroll, NC logo badge, Get Started CTA
Hero	Headline, brand stats (4 divisions, \$300+ trading target, 36.2M SMBs)
Divisions	All 4 division cards — Agent, Studio, Trading Brain, Managed Builds
Business Agent	Feature list + live "Daily Brief" mockup panel
Trading Brain	4 strategies + 4-layer architecture + build progress bars
Pricing	4 tiers — Creator \$19.97, Pro \$49, Starter Agent \$499+setup, Growth \$1,500+setup

Section	Content
CTA	Free AI Command Audit offer
Footer	Links + GangsterNerds LLC copyright

Tech Stack

- Pure HTML5 + CSS3 + vanilla JS
- Zero build tools, zero npm, zero frameworks
- Google Fonts (Inter) — loads from CDN
- Smooth scroll built in
- Mobile responsive via CSS grid (auto-fit)
- Dark theme ( #0a0a0a base,  #F5C518 gold)

To Update the Site

Just edit (index.html) directly in GitHub's web editor or push a new version.
Changes go live in ~30 seconds after push.

Contact Email Setup

The CTA button links to (mailto:hello@nerdcommand.info).

Update this in (index.html) (search for (hello@nerdcommand.info)) once your email is configured.

Built for GangsterNerds LLC / NerdCommand.info / v1.0 — June 2026
